Never wait for servers or infrastructure again

Instantly provision Windows and Linux Virtual Machines, apps, and infrastructure within Microsoft-managed data centers around the world.

[Learn more about Virtual Machines on Azure >](#)

"With Azure, we don't have to worry about acquisition of new hardware or bigger networks. We can just make it happen."
Steve Novoselac, IT Manager, Trek Bicycles

Azure IaaS and Developers

Development

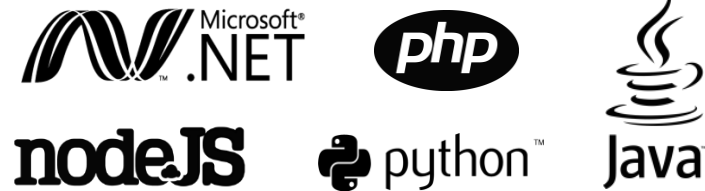

OS

Data on VMs

Languages

PaaS

WebSites

Integration

Mobile

DBaaS

Demo – Easy Command Line Development

Microsoft Azure Websites

Scalable

High-density and secure web hosting

Open publishing methods and protocols

Integrated and open solution

Automated

Lowers customer onboarding costs and streamlines upselling

Easily move from shared to reserved

Flexible

Support for PHP, Node.js, and ASP.NET

Metering and throttling of resources

Fully integrated into Web App Gallery

Demo – Using a few more Azure Features

Azure IaaS and Operational Needs

Development Needs

Operational Needs

Configuration Management

Windows Azure Service Bus

Connectivity

Rich options for interconnecting apps across network boundaries

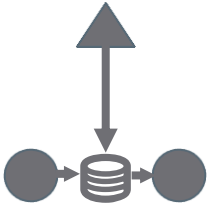

- Service Relay
- Protocol Tunnel Eventing

Service Management

Consistent management surface and service observation capabilities

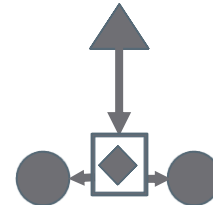

- Naming, Discovery
- Monitoring

Messaging

Reliable, transaction-aware cloud messaging infrastructure for business apps

- Queuing Pub/Sub
- Reliable Transfer

Integration Routing

Content-based routing, document transformation, and process coordination

- Coordination Transformation
